

Robert J. Tetlow is Senior Economist, in the Macroeconomics and Quantitative Studies Section, Division of Research and Statistics, Federal Reserve Board. He has been at the Board since 1995. Prior to that, he was with the Bank of Canada. He has published in a number of leading journals including the *Journal of Monetary Economics*, the *Journal of Money, Credit and Banking*, *Review of Economic Dynamics*, and the *Journal of Economic Dynamics & Control*. His research interests are monetary theory and policy with particular interest in the implications of model misspecification for policy, robust control and learning. At the Bank of Canada, he was co-designer of QPM, which *The Economist* once described (a bit too extravagantly) as the central banking community's first DSGE model. He lives in Vienna, Virginia with his wife and two daughters.
